Challenge Labs

Validate your skills with Challenge Labs

Challenge labs are goal oriented, short-duration, scenario-based hands-on exercises. Ideal for cloud technologies, they provide skills development and assessments across multiple platforms and technologies with a focus on Microsoft and AWS but also VMware and Security. They are useful before, during and/or after training and provide you with high level guidance and requirements as opposed to detailed step-by-step instructions. The current 19 Competencies can be mapped to the new six Solution Areas as shown below.

What are Challenge Labs?

- Challenge Labs are available in three levels: Guided, Advanced and Expert
- Each lab presents a practical scenario to a learner who is then asked to solve or perform set requirements
- Hundreds of challenges are available around Microsoft, AWS, VMware, Cybersecurity & more
- Purchase challenges as a collection, library or All Access Pass
- Students may take each challenge three times

How can they help you?

- Challenges provide the additional hands-on practice you want and need
- Use them to assess your knowledge before and after training
- They can help prepare for the hands-on scenarios in many vendors' performance-based exams

PRODUCT	ACCESS	NUMBER OF LABS	DETAILS
Collection	90 Days	Up to 65	Challenge Labs Collection is a 90-day subscription that includes access to challenges related to specific vendor certification exam objectives e.g Microsofts AZ-104.
